

**NAME**

wtrclst - water closet

**SYNOPSIS**

**wtrclst** [-option] [-c *config-file*] *visit* ...

**DESCRIPTION**

**wtrclst** initiates a receptacle to receive human effluents from stdout upon a visit to an appropriate enclosure containing a water closet

**OPTIONS**

- b Do not write 'busy' to stdout while processing.
- c *config-file*  
Use the alternate system wide *config-file* instead of */etc/wtrclst.conf*. This overrides any **WATERCLOSET** environment variable.
- a adult size wc (default)
- i children size wc
- f sitting
- m standing (equivalent to -u)
- u seat in up position
- d seat down (equivalent to -f)
- l lid up (default)
- 1 flush before use
- 2 auto-flush (some Japanese models)
- 3 flush after use (default)
- w western wc (default)
- o oriental wc
- h hollandese wc (must be used with -f)
- z slow user (equivalent to -amlu). wc does not flush before user has buttoned his fly.
- r Recursive mode. For male users successfully operated for prostate complaints.

**FILES**

*/etc/wtrclst.conf*

The system wide configuration file. See **wtrclst(5)** for further details.

*~/.wtrclstrc*

Per user configuration file. See **wtrclst(5)** for further details.

**ENVIRONMENT**

**WATERCLOSET**

If non-null the full pathname for an alternate system wide *wtrclst.conf*. Overridden by the -c option.

**DIAGNOSTICS**

The following diagnostics may be issued on stderr:

Bad magic number.

The input does not look like a natural effluent.

Old style baz segments.

**wtrclst** can only handle urine and feces. Java object libraries are not supported in this version.

Next roll not initiated

Out of toilet paper. Reload the holder.

Watch your feet

You are urinating on the floor.

Bad aim

You are fumbling with your tool and hitting the rim or seat.

Old age

Both of the above

Panic

Leave the door open for better ventilation.

Core dumped

Call the cleaning staff.

**BUGS**

The command name should have been chosen more carefully to reflect its purpose.
